Resume

As a proactive software engineer with a robust foundation in web and mobile app development, I have effectively leveraged my autodidactic skills to gain substantial hands-on experience quickly. Over the past year, I have designed, built, and deployed several full-stack projects, demonstrating proficiency in front-end and back-end technologies such as JavaScript TypeScript, React, React Native, Node.js, and ASP.NET. My experience also includes using C/C++ for performance-critical applications. I excel in creating user-centric solutions that balance product value and engineering complexity. With a passion for innovation, I continuously seek to push products forward and tackle new challenges independently. I thrive in collaborative environments, actively engaging with product and marketing teams to deliver impactful features and drive positive change.
